Fraunhofer IZFP Dresden

Sensor Modules for Structural Health Monitoring

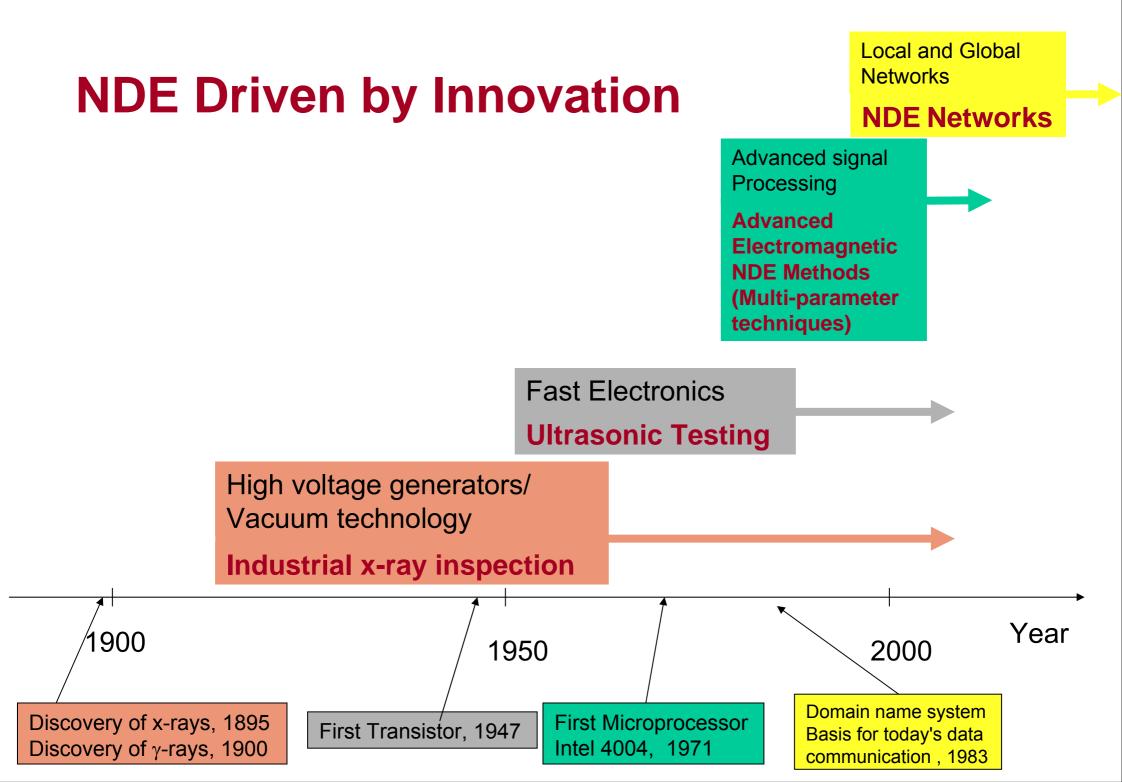

Axel Berthold

Fraunhofer Institut

Zerstörungsfreie DRESDEN Prüfverfahren

Institut Zerstörungsfreie Prüfverfahren

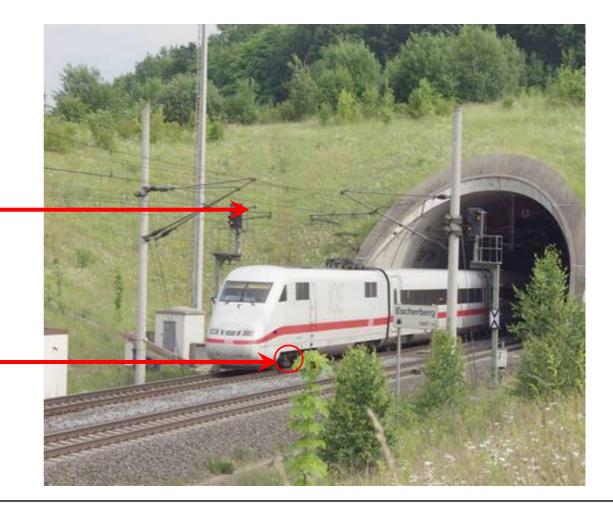

Application: Railway Systems

High speed trains

Task (selection)

Monitoring overhead traction line

Ultrasonic inspection for crack detection in wheels and in rails

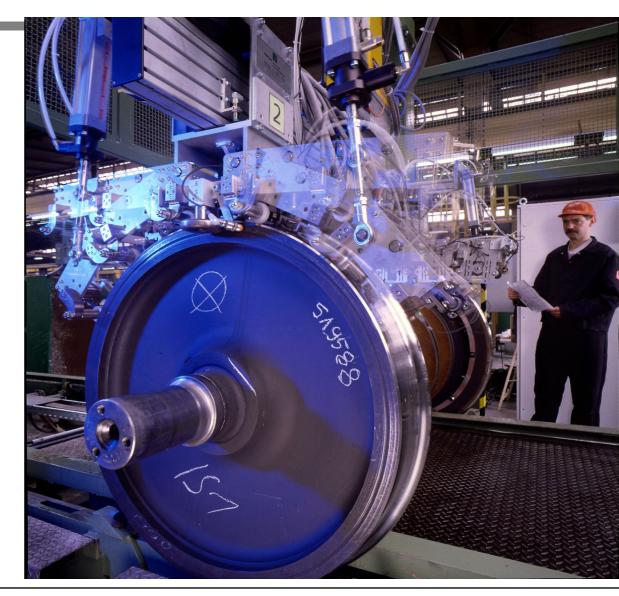

Fraunhofer Institut

Institut Zerstörungsfreie Prüfverfahren

Transportation and Traffic

Automatic Ultrasonic Railroad Wheel Set Testing Station:

- Reliable Flaw Detection
- Fast Analysis
- Complete Documentation

Pig System for Pipeline Testing

Problem

Solution

Fraunhofer Institut

Institut Zerstörungsfreie Prüfverfahren

Pig System for Pipeline Testing

Induction into pipeline

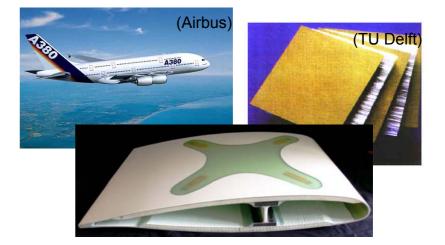

Institut Zerstörungsfreie Prüfverfahren

Aircraft inspection

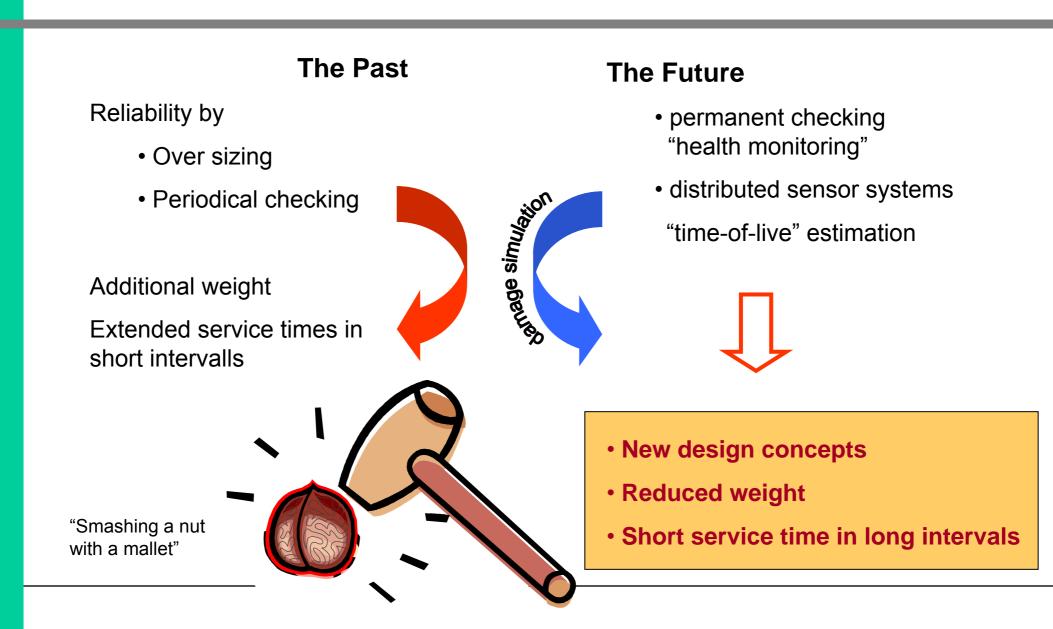

- Regular inspections
- Coating removement
- Fatigue testing
- Eddy current inspections
- Ultrasonic inspections

Aircraft components

Institut Zerstörungsfreie Prüfverfahren

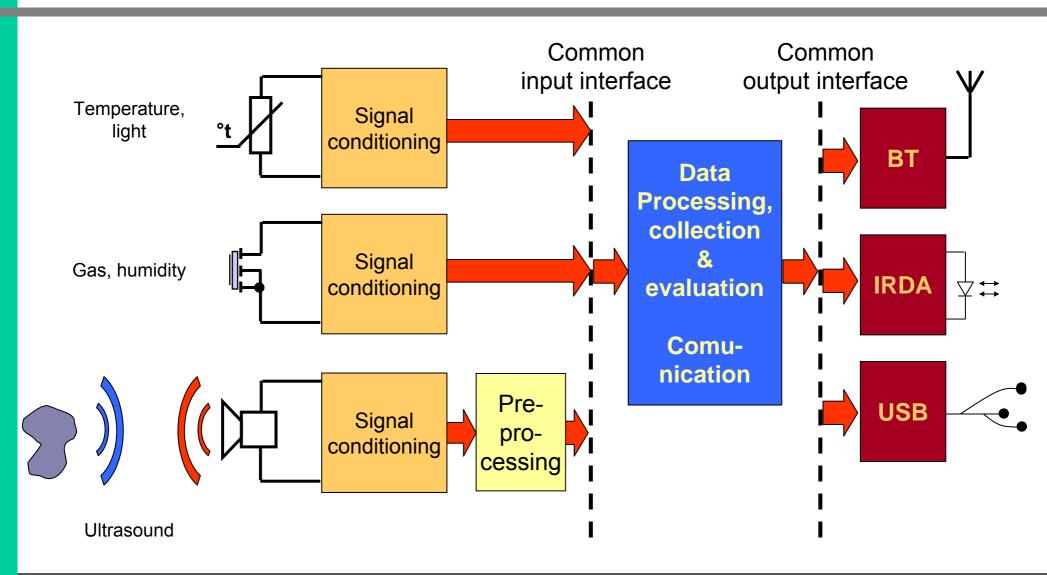

SHM Benefits

Institut Zerstörungsfreie Prüfverfahren

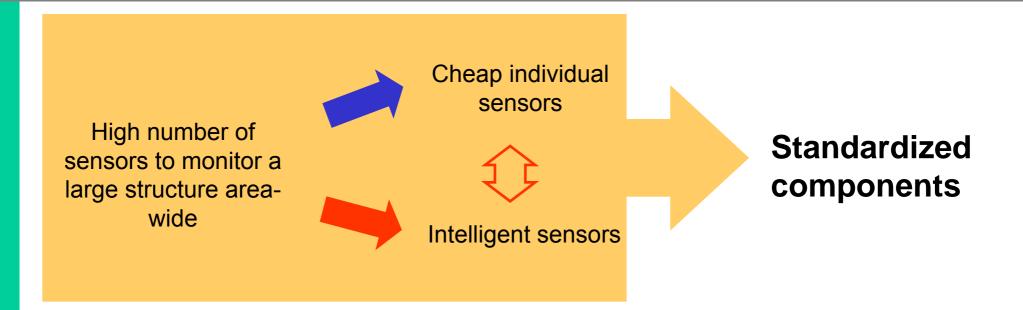

Modular Sensors

Institut Zerstörungsfreie Prüfverfahren

Distributed Sensor Systems

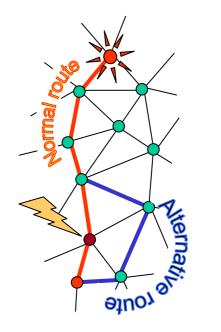

- Unique core for data processing and communication
- Modular input stages for analog/mixed signal processing
- Modular output stages for data transfer and inter-sensor-communication
 - Sensor network: sensor redundancy

Institut Zerstörungsfreie Prüfverfahren

Self Assembling Sensor Networks

- Data on demand / data in case of need
- Inter-sensor communication
 - Networked sensors
 - Integrity of the values (plausibility checks)
 - Bypassing/virtual replacement of defect sensors
 - Need of small transmission power

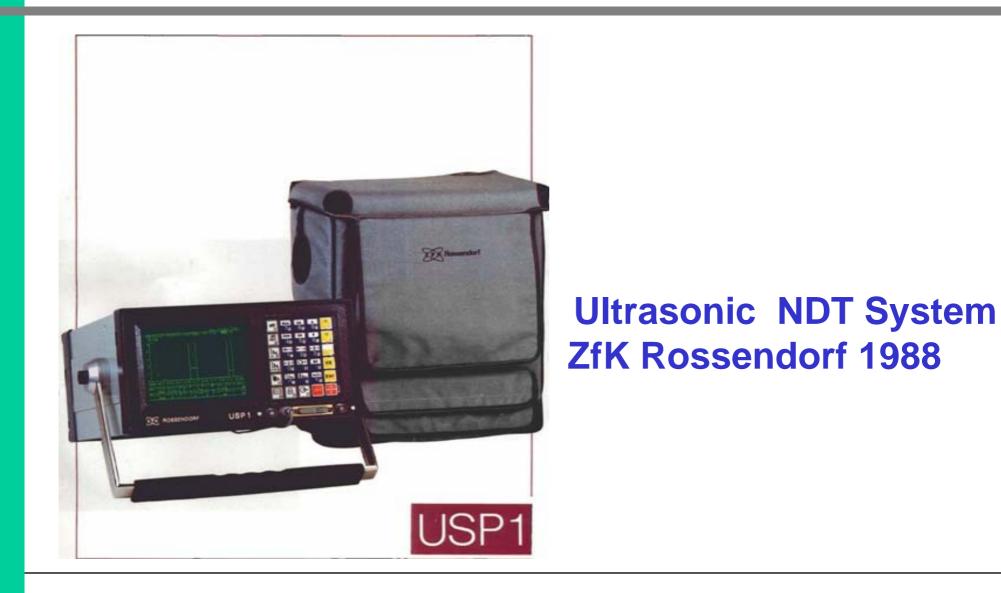

Bad knot can still be addressed: Its value is interpolated by neighboring sensors of the same kind.

Solution

Institut Zerstörungsfreie Prüfverfahren

SHM with Ultrasound: Tomography

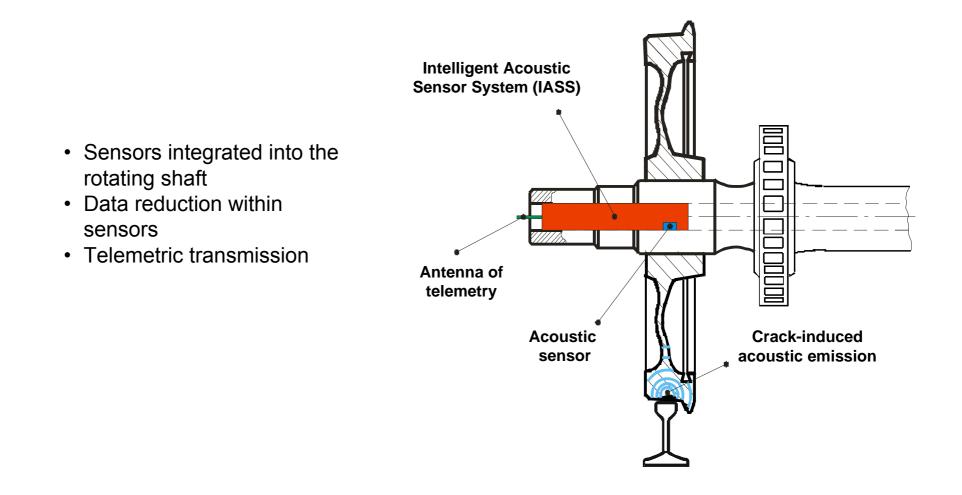

Sensor with structure integrated signal evaluation electronics

Fraunhofer Institut

Institut Zerstörungsfreie Prüfverfahren

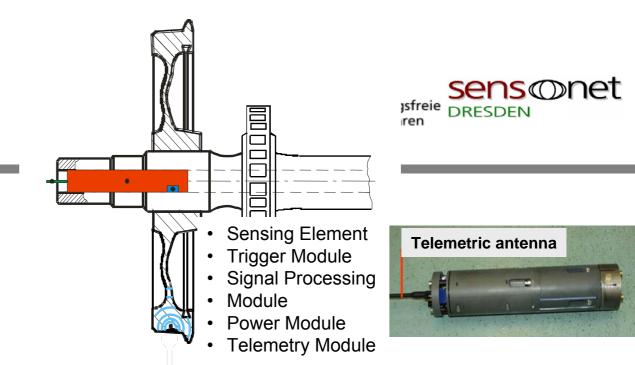

Application: Railroad Health Monitoring

Sensors for NDE

- •Periodical inspection
- •Coupling or non-contact
- Scanning or imaging
- •High performance
- •Signal preprocessing on board
- •Easy to replace
- •Energy not critical

Sensors for SHM

•Sensors stay on board (cont. or periodical readout)

- •Structure integrated
- •Local (hot spots) or averaging (fibers, plate waves)
- •Low cost
- •Intelligent (processor + Interface) SAN
- •Extremely high reliability (10 to 30 Years)
- •Stand alone, energy management

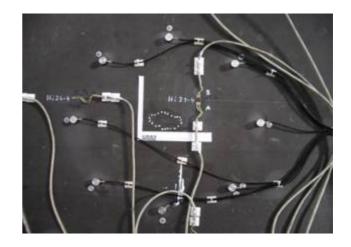

Fraunhofer _{Institut} Zerstörun Prüfverfa

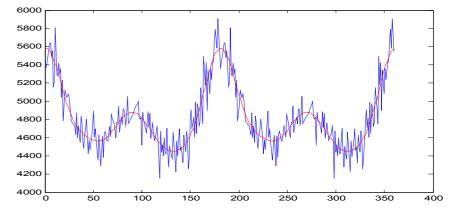

Institut Zerstörungsfreie Prüfverfahren

Applications of Sensor Networks

Instrumentation of CFRP-Panel

Fraunhofer Institut Zerstörungsfreie Prüfverfahren

Applications of Sensor Networks

- Monitor for pipes in the chemical industry, refineries and power plants (RWE, Total)
- Combination of high-frequency, guided waves and low-frequency vibration measuring technique
- High-temperature sensors

sens onet

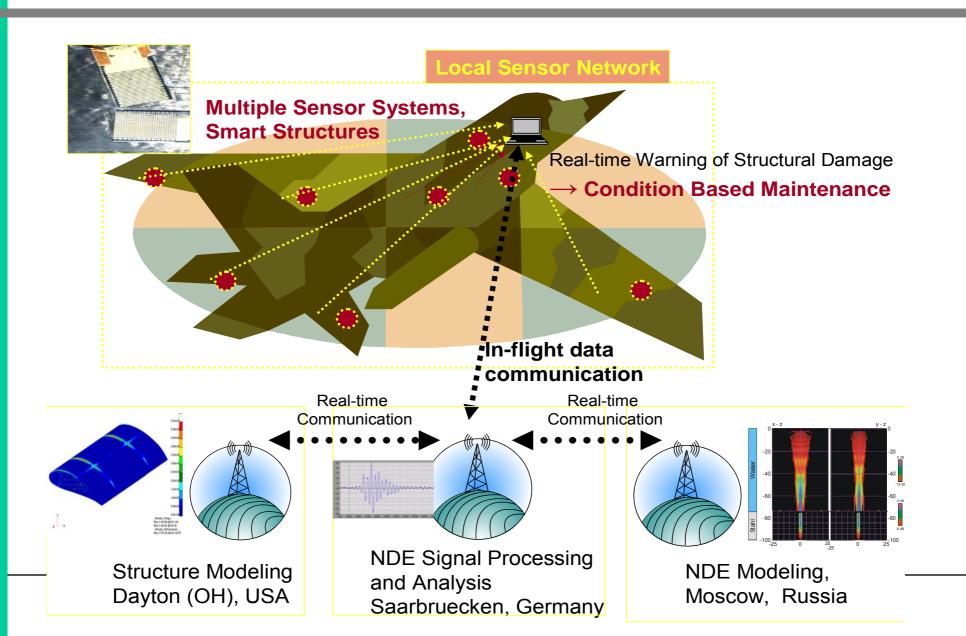

Image Total

Institut Zerstörungsfreie Prüfverfahren

Sensor Networks

21

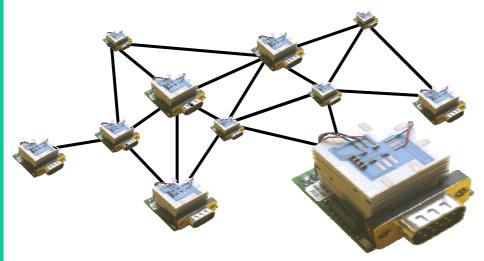

Institut Zerstörungsfreie Prüfverfahren

Applications of Sensor Networks

Meshed Topology

Advantages

- Distributed management
- Unlimited extension
- Redundant layout
- High reliability

Vision:

Wireless Sensor Network Self organizing / scalable

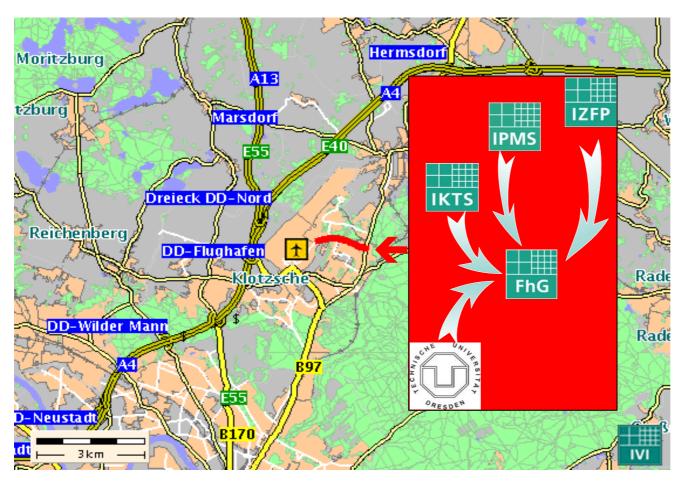

Disadvantages

- High efforts for administration
- Expensive networking

Summary

Applications of modular sensor systems

Health Monitoring

- Airplanes
- Railroad systems
- Pipelines
- Chemical plants
- Medicine
- Environmental protection

NDE of Materials and Structures

according to codes, standards, and regulations

Process Monitoring

User Support

- Airplanes
- Railroad systems
- Automotive ...
